

RX-100 Receiver

The RX-100 Receiver is designed to work with 12v or 24v DC trap systems.

Before any attempt is made to connect the RX-100 to a trap, it is necessary to know which of the trap wires are +POS, - NEG & SWITCH wires.

The RX-100 Receiver is wired in the following format:

BROWN	-	12/24v DC +
BLUE	-	0v DC -
YELLOW/GREEN	-	Switch

Incorrect wiring can damage the RX-100 and/or your trap (Invalidating any warranty), so users should check their manufacturers instructions and ensure that the trap is still wired in the correct format.
